REPORT

REPORT OF THE BIRTHS, DEATHS, AND MARRIAGES REGISTERED IN SCOTLAND DURING THE QUARTER ENDING 31ST MARCH 1931.

THE changes in local public health administration consequent on the passing of the Local Government (Scotland) Act, 1929, have rendered necessary a reconsideration of the form and scope of this Quarterly Return.

It has been decided to limit the areas dealt with to the 24 Large Burghs as defined in that Act and to the County areas not included in such burghs. This limitation has made it possible to show statistics for each area in greater detail, consisting of a classification of Causes of Death according to the International Short List (as adapted for use in Scotland) and an age distribution by 12 age periods.

The four main Tables comprised in the Return may be summarised as follows :—

Table I shows for the counties and the large burghs of Scotland the number of births (with distinction as to legitimacy), marriages and deaths (those from the principal epidemic diseases and of infants under one year being shown separately), together with the corresponding rates per 1,000 population. The list of the principal epidemic diseases has been modified.

Table II, as formerly, shows for Scotland the numbers and rates per 1,000 population of births, marriages and deaths for each quarter and for the whole year in each of the last ten years. Illegitimate births and deaths under one year are shown separately.

Table III shows in detail for Scotland the causes of death according to the Detailed International List (adapted) in certain age groups and by sex.

Table IV shows in Short List form the causes of death and, for all causes, the ages at death in the counties and large burghs of Scotland.

The publication of this Return has been delayed in order that the provisional populations as ascertained at the recent Census might be incorporated and used for the calculation of rates. The rates in Table II applicable to the years 1922 to 1930 have been adjusted accordingly.

Births.—The 23,558 births in the present quarter are 471 more than in the preceding quarter, the rate per 1,000 population, 19·7, being 0·9 above that recorded for last quarter. Compared with the average of the first quarters of the last five years 1926-1930, the number of births and the rate per 1,000 population in the present period are 908 and 0·7 respectively below that average.

The birth-rate in the aggregate of large burghs, 20·7, is higher than

in the rest of Scotland (18·6), and in individual areas the rates range in burghs from 31·9 in Port Glasgow, 27·0 in Hamilton and 25·7 in Coatbridge, to 16·9 in Kirkcaldy, 16·2 in Edinburgh, 18·5 in Aberdeen, 18·7 in Stirling and 18·9 in Inverness, and in counties exclusive of large burghs from 22·5 in Kincardine, 22·3 in Stirling and 21·8 in Lanark, to 12·7 in Zetland, 13·1 in Bute and 13·9 in Sutherland.

The proportion of illegitimate births, 7·5 per cent., is 0·7 above the figure for last quarter, but is practically equal to the average of the rates for the first quarters of the preceding quinquennium (7·3 per cent.).

Births registered in January numbered 7,796, in February 7,342, and in March 8,420, the equivalent monthly birth-rates being 19·0, 19·8 and 20·5 respectively.

Marriages.—The number of marriages registered, 7,068, is 1,143 below that for the previous quarter, the rate per 1,000 population being 0·8 below. The number and rate per 1,000 population for the present period are 250 and 0·1 per 1,000 below the average of the corresponding quarters of the last five years.

The rate in the aggregate of large burghs is 6·8 per 1,000, as against 4·9 for the rest of Scotland, and in individual areas the rates in burghs range from 10·1 in Inverness, 7·8 in Falkirk, 7·4 in Kirkcaldy, 7·3 in Glasgow and 7·3 in Ayr, to 4·1 in Arbroath, 4·1 in Clydebank and 4·5 in Greenock, and in counties exclusive of large burghs from 6·8 in West Lothian, 6·1 in Wigtown and 6·0 in Clackmannan, to 1·6 in Kinross, 2·9 in Nairn and 3·3 in Caithness.

Marriages registered in January numbered 3,196, in February 1,880, and in March 1,992, the equivalent monthly marriage-rates being 7·8, 5·1 and 4·8 respectively.

Deaths.*—Deaths registered during the quarter number 20,189 and are 4,204 above those recorded in the previous quarter. The corresponding death-rate is 16·9 per 1,000, being 3·8 above that for the previous quarter. The number and rate per 1,000 are, however, 250, and 0·2 below the average for the corresponding quarter of the last five years.

The death-rate in the aggregate of the large burghs is 17·3 as compared with 16·5 for the rest of Scotland, and the rates in individual districts range in burghs from 21·6 in Arbroath, 19·7 in Aberdeen and 19·2 in Inverness, to 10·0 in Clydebank, 11·2 in Falkirk and 12·9 in Stirling, and in counties exclusive of burghs from 24·9 in Sutherland, 23·3 in Zetland and 22·7 in Clackmannan, to 12·8 in Stirling, 13·3 in West Lothian and 14·3 in Lanark.

Deaths registered in January numbered 6,666, in February 6,145, and in March 7,378, the equivalent monthly death-rates being 16·2, 16·5 and 17·9 respectively.

Infantile Mortality.—Deaths of children under one year numbered 2,653, equivalent to a rate of 113 per 1,000 registered live births. These deaths are 582 more than last quarter and the rate is 23 more. The average infantile mortality rate for the first quarters of the quinquennium

* *Note.*—Where the place of death differs from the place of usual residence of the deceased, such death, for the purpose of these statistics, is allocated to the place of usual residence if in Scotland.

1926-1930 being 110 per 1,000 births, the returns of the present period show little difference from that level.

The rate of infantile mortality, which in the aggregate of large burghs is 117 as compared with 106 in the rest of Scotland, varies in burghal areas from 158 in Coatbridge, 149 in Aberdeen and 140 in Dumfries, to 48 in Falkirk, 64 in Dunfermline and 71 in Clydebank, and in counties exclusive of large burghs from 206 in Nairn, 180 in Caithness and 160 in Clackmannan, to 28 in Inverness, 36 in Orkney and 49 in Bute.

Causes of Death.—*Principal Epidemic Diseases* (Nos. 1-18 of Detailed International List).—Of the 20,189 deaths registered during the quarter, 1,605, of 7·9 per cent., were attributed to the principal epidemic diseases. These deaths include 56 from measles, 41 from scarlet fever, 438 from whooping-cough, 118 from diphtheria, 764 from influenza and 90 from cerebro-spinal fever. Compared with the previous quarter, the main features in this group of diseases are a diminution in the deaths attributed to diphtheria from 139 to 118, but an increase in those due to measles from 39 to 56, to scarlet fever from 29 to 41, to whooping-cough from 120 to 438, to influenza from 170 to 764, and to cerebro-spinal fever from 39 to 90. The death-rate from the entire group of diseases corresponds to a rate of 134 per 100,000 population. The highest rates for the group are recorded in the burghs of Inverness, Dumbarton, Rutherglen and Coatbridge, where the mortality rates per 1,000 population are 3·2, 2·3, 2·3 and 2·0 respectively, and in the counties, exclusive of burghs, of Zetland, Moray, Clackmannan and Banff, where the rates respectively are 6·4, 3·9, 2·7 and 2·1. In each of these counties the high epidemic rate was mainly due to influenza.

Tuberculosis.—Deaths from all forms of tuberculosis, 1,202, account for 6·0 per cent. of the total deaths. Of these, 880 are ascribed to tuberculosis of the respiratory system, an increase compared with last year of 79, to the central nervous system 143, a decline of 14, to abdominal tuberculosis 81, an increase of 14, and 98, or 35 fewer, to other forms of tuberculosis. The quarterly death-rate from all forms of the disease is 101 per 100,000 compared with 108 for the same quarter of the previous five years, and from respiratory tuberculosis 74 compared with 77.

Malignant Disease.—Deaths from malignant disease, which numbered 1,828, account for 9·1 per cent. of deaths from all causes, and are equivalent to a rate of 153 per 100,000 population. These deaths are 19 more than in the previous quarter, and the death-rate is 11 per 100,000 more than the mean of the corresponding quarters of the last five years.

Respiratory Diseases.—Deaths from the principal diseases of the respiratory system, pneumonia and bronchitis, show an increase compared with the previous quarter in the case of pneumonia from 1,463 to 2,144 and of bronchitis from 977 to 1,758. Pneumonia was responsible for 10·6 and bronchitis for 8·7 per cent. of the total deaths registered, and the death-rates from these conditions are 180 and 147 per 100,000 population respectively. For the first quarters of the preceding five years the corresponding averages are 194 and 141 respectively.

Pregnancy and Childbirth.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 156, and are equal to a rate of 6·6 per 1,000 births. This rate is 0·8 per 1,000 lower than the average rate for the corresponding quarters of the preceding five years.

Violence.—Deaths from violence numbered 687, account for 3·4 per cent. of all deaths, and are equivalent to a rate of 58 per 100,000 persons. These deaths are 26 fewer than in the previous quarter. Of the total assigned to this group, 115 were due to accidents with motor vehicles, which is 82 fewer than were recorded in the previous quarter. The death-rate from violence is 3 per 100,000 less than the average for the corresponding quarters of the previous five years.

For comparative purposes the accompanying table is given showing the death-rates from several important causes in the present quarter and the average rate for the first quarters of the five previous years. Compared with the standard, mortality for this quarter is lower in respect of measles, scarlet fever, diphtheria, influenza, tuberculosis (all forms), pneumonia, puerperal conditions and violence, but higher for whooping-cough, cerebro-spinal fever and malignant disease.

CAUSES OF DEATH.	Death-rates per 100,000 population.

119 Diarrhoea and enteritis (under 2 years)	143	85	58	133	10
120 (a) Diarrhoea and enteritis (over 2 years)	50	23	27	...	6	4	2	4	12	9	11
(b) Ulceration of intestines	10	5	5	1	1	1	2	2	1	1
121 Appendicitis	139	79	60	...	2	14	11	34	18	16	14	16	9	5
122 (a) Hernia	66	29	37	5	2	...	1	1	12	15	16	12
(b) Intestinal obstruction	59	35	24	6	1	7	3	3	5	12	6	12
123 Other diseases of intestines	18	12	6	1	1	1	4	6	3	1
124 Cirrhosis of liver	44	24	20	5	14	10	10	5
125 (1) Acute yellow atrophy of liver . . .	1	1	1
(2) Other diseases of liver	18	7	11	1	7	7	2
126 Biliary calculi	20	7	13	1	2	1	4	4	4	4
127 (1) Cholecystitis	34	8	26	1	8	9	9	6
(2) Other diseases of gall bladder and ducts	4	1	3	1	1	2
128 Diseases of pancreas	9	5	4	1	...	1	...	5	2
129 Peritonitis without stated cause . . .	17	3	14	5	1	...	2	2	3	3	...	1
X. NON-VENEREAL DISEASES OF GENITO-URINARY SYSTEM.																	
130 Acute nephritis	58	32	26	1	6	6	...	10	4	9	6	6	9	1
131 Chronic nephritis	376	175	201	1	2	4	18	36	52	110	96	50
132 Nephritis unspecified	85	48	37	1	5	4	9	13	18	21	13
133 Other dis. of kidney and annexa . . .	45	24	21	4	1	1	3	5	8	6	12	5
134 Calculi of urinary passages	11	8	3	1	...	1	2	5	2
135 Diseases of bladder	52	30	22	1	1	6	17	21
136 Dis. of urethra, urinary abscess, &c. .	6	6	1	...	2	2	1
137 Diseases of prostate	98	98	18	40	32
138 Diseases of male genital organs . . .	6	6	...	1	1	1	2	1
139 (a) Diseases of ovary, fallopian tube and parametrium	13	...	13	2	4	3	1	1	1	1
(b) Diseases of uterus	11	...	11	1	1	2	4	2	1
(c) Diseases of breast	1	...	1	1
(d) Other diseases of female geni- tal organs	3	...	3	1	1	1
XI. DISEASES OF PREGNANCY AND CHILDBIRTH.																	
140 Post-abortion sepsis	8	...	8	2	4	2
141 Abortion not returned as septic . . .	3	...	3	2	1
142 Ectopic gestation	5	...	5	1	3	1
143 Other accidents of pregnancy	3	...	3	2	1
144 (a) Placenta prævia	4	...	4	1	3
(b) 1. Accidental hæmorrhage	2	...	2	2
2. Oth. puerperal hæmorrhage	8	...	8	1	3	4
145 Puerperal sepsis	55	...	55	11	28	16
146 Puerperal albuminuria, Convulsions .	26	...	26	8	11	7
147 (1) Uncontrollable vomiting	6	...	6	2	4
(2) Other toxæmias of pregnancy . . .	9	...	9	2	5	2
148 Puerperal phlegmasia alba dolens, Embolism	9	...	9	3	6
149 Other accidents of childbirth	14	...	14	4	7	3
150 Other or unspecified conditions of the puerperal state	4	...	4	4

TABLE III.—continued.

	All Ages.			Age.											
	Both Sexes.	Males.	Females.	-1	1-	5-	10-	15-	25-	35-	45-	55-	65-	75-	85 and over.
XII. DISEASES OF SKIN AND CELLULAR TISSUE.															
151 Carbuncle, Boil	8	5	3	1	...	1	...	2	3	...	1
152 Cellulitis, Acute abscess	62	35	27	13	4	5	2	5	10	6	8	7	2
153 Other dis. of skin and its annexa	24	8	16	6	1	5	10	2
XIII. DISEASES OF BONES AND ORGANS OF LOCOMOTION.															
154 Acute infectious osteomyelitis and periostitis	31	21	10	1	2	6	8	4	3	...	1	...	4	2	...
155 Other diseases of bones	3	2	1	1	1	1	...
156 Diseases of joints and other organs of locomotion	14	9	5	2	1	1	...	2	2	1	1	2	2
XIV. CONGENITAL MALFORMATIONS.															
157 Congenital malformations	151	91	60	137	9	...	4	...	1
XV. DISEASES OF EARLY INFANCY.															
158 Congenital debility	318	182	136	318
159 Premature birth	509	258	251	509
160 Injury at birth	31	22	9	31
161 Oth. dis. peculiar to early infancy	67	44	23	67
XVI. SENILITY.															
162 Senility, Senile dementia	915	331	584	2	112	511	290
XVII. DEATHS FROM VIOLENCE.															
171 Suicide (163 to 170)	124	89	35	7	20	16	30	27	18	6	...
175 Homicide (172, 173, 174)	5	1	4	2	2	1
177 Food poisoning
178 Accidental gaseous poisoning . . .	4	4	3	1

REPORT

REPORT OF THE BIRTHS, DEATHS, AND MARRIAGES REGISTERED IN SCOTLAND DURING THE QUARTER ENDING 30TH JUNE 1931.

THE alterations effected this year in the form and scope of the Quarterly Returns have been indicated in the preceding Report for the quarter ending 31st March 1931.

The four main Tables comprised in the Return may be summarised as follows :—

Table I shows for the counties and the large burghs of Scotland the number of births (with distinction as to legitimacy), marriages and deaths (those from the principal epidemic diseases and of infants under one year being shown separately), together with the corresponding rates per 1,000 population. The list of the principal epidemic diseases has been modified.

Table II, as formerly, shows for Scotland the numbers and rates per 1,000 population of births, marriages and deaths for each quarter and for the whole year in each of the last ten years. Illegitimate births and deaths under one year are shown separately.

Table III shows in detail for Scotland the causes of death according to the Detailed International List (adapted) in certain age groups and by sex.

Table IV shows in Short List form the causes of death and, for all causes, the ages at death in the counties and large burghs of Scotland.

Births.—The 24,122 births in the present quarter are 564 more than in the preceding quarter, the rate per 1,000 population, 20·0, being 0·3 above that recorded for last quarter. Compared with the standard,* the number of births and the rate per 1,000 population in the present period are 1,285 and 1·0 respectively below that average.

The birth-rate in the aggregate of large burghs, 21·1, is higher than in the rest of Scotland (18·6), and in individual areas the rates range in burghs from 27·4 in Hamilton, 26·7 in Greenock, 25·5 in Coatbridge and 24·7 in Airdrie, to 15·6 in Perth, 15·7 in Arbroath and 17·9 in Edinburgh, and in counties exclusive of large burghs from 22·8 in Lanark, 22·5 in West Lothian, 22·1 in Aberdeen and 21·2 in Wigtown, to 9·4 in Bute, 11·2 in Zetland, 11·7 in Sutherland and 12·5 in Argyll.

The proportion of illegitimate births, 7·3 per cent., is 0·2 below the figure for last quarter, but is exactly equal to the standard rate for this quarter of the year.

Births registered in April numbered 8,009, in May 8,070 and in

* The standard adopted for comparative purposes is the average of the same number and rate for the corresponding quarters of the five preceding years.

June 8,043, the equivalent monthly birth-rates being 20·1, 19·6 and 20·2 respectively.

Marriages.—The number of marriages registered, 8,158, is 1,090 above that for the previous quarter, the rate per 1,000 population being 0·9 above. The number and rate per 1,000 population for the present period are 171 and 0·2 respectively above the standard for this period of the year.

The rate in the aggregate of large burghs is 7·9 per 1,000, as against 5·4 for the rest of Scotland, and in individual areas the rates in burghs range from 12·6 in Inverness, 10·6 in Dumfries and 9·6 in Stirling, to 2·8 in Dumbarton, 4·6 in Airdrie and 4·8 in Coatbridge, and in counties exclusive of large burghs from 7·9 in Wigtown, 7·8 in Moray and 7·7 in East Lothian, to 2·8 in Zetland, 3·0 in Sutherland and Inverness, 3·4 in Ross and Cromarty and 3·8 in Orkney.

Marriages registered in April numbered 3,014, in May 1,144 and in June 4,000, the equivalent monthly marriage-rates being 7·6, 2·8 and 10·0 respectively.

Deaths.*—Deaths registered during the quarter numbered 15,918 and are 4,271 below those recorded in the previous quarter. The corresponding death-rate is 13·2 per 1,000, being 3·7 below that for the previous quarter. The number and rate per 1,000 are 316 and 0·2 below the standard figure for this quarter of the year.

The death-rate in the aggregate of the large burghs is 13·3 as compared with 13·0 for the rest of Scotland, and the rates in individual districts range in burghs from 20·9 in Arbroath, 14·7 in Dundee and 14·4 in Airdrie, to 9·8 in Clydebank, 10·8 in Motherwell and Wishaw and 11·0 in Rutherglen, and in counties exclusive of burghs from 21·9 in Caithness, 19·9 in Sutherland, 18·1 in Inverness and 16·5 in Moray, to 10·8 in West Lothian, 11·2 in Renfrew and 11·3 in Stirling.

Deaths registered in April numbered 5,977, in May 5,158 and in June 4,783, the equivalent monthly death-rates being 15·0, 12·5 and 12·0 respectively.

Infant Mortality.—Deaths of children under one year numbered 1,867, equivalent to a rate of 77 per 1,000 registered live births. These deaths are 786 less than last quarter and the rate 36 points lower. The average infant mortality rate prevailing in the period adopted as standard, however, being 78 per 1,000 births, the returns of the current quarter show little difference from that level.

The rate of infant mortality, which in the aggregate of large burghs is 83 as compared with 69 in the rest of Scotland, varies in burghal areas from 134 in Port Glasgow, 104 in Glasgow and 101 in Arbroath, to 25 in Rutherglen, 34 in Kirkcaldy and 35 in Clydebank, and in counties exclusive of large burghs from 163 in Caithness, 92 in Lanark and 91 in Angus, to 25 in Nairn and Orkney, 30 in Argyll and 32 in Wigtown.

* *Note.*—Where the place of death differs from the place of usual residence of the deceased, such death, for the purpose of these statistics, is allocated to the place of usual residence if in Scotland.

Causes of Death.—*Principal Epidemic Diseases.*—Of the 15,918 deaths registered during the quarter, 1,003, or 6·3 per cent., were attributed to the principal epidemic diseases. These deaths include 84 from measles, 43 from scarlet fever, 308 from whooping-cough, 82 from diphtheria, 310 from influenza and 85 from cerebro-spinal fever. Compared with the previous quarter, the main features in this group of diseases are a diminution in deaths attributed to influenza from 764 to 310, diphtheria from 118 to 82, whooping-cough from 438 to 308, and to a less extent, cerebro-spinal fever from 90 to 85, and an increase in those attributed to measles from 56 to 84. The death-rate from the entire group of these epidemic diseases corresponds to a rate of 83 per 100,000 population. The highest rates for the group are recorded in the burghs of Airdrie, Arbroath and Dundee, where the mortality rates per 1,000 population are 1·5, 1·4 and 1·3 respectively, and in counties exclusive of large burghs in Orkney, Caithness and Sutherland, where the rates are respectively 3·1, 2·7 and 2·0.

Tuberculosis.—Deaths from all forms of tuberculosis, 1,175, account for 7·4 per cent. of the total deaths. Of these, 807 are ascribed to tuberculosis of the respiratory system, a decrease compared with last quarter of 73, 164 to tuberculosis of the central nervous system, an increase of 21, 83 to abdominal tuberculosis, an increase of 2, and 121, or 23 more, to other forms of the disease. The quarterly death-rate from all forms of tuberculosis is 97 per 100,000 compared with 108 for the same quarter of the previous quinquennium, and from respiratory tuberculosis 67 compared with 75.

Malignant Disease.—Deaths from malignant disease, which numbered 1,715, account for 10·8 per cent. of deaths from all causes, and are equivalent to a rate of 14·2 per 100,000 population. These deaths are 113 less than in the previous quarter, and the death-rate is 2 per 100,000 more than the standard rate.

Respiratory Diseases.—Deaths from the principal diseases of the respiratory system, pneumonia and bronchitis, show a decrease compared with the previous quarter, in the case of pneumonia from 2,144 to 1,223 and of bronchitis from 1,758 to 795. Pneumonia was responsible for 7·7 and bronchitis for 5·0 per cent. of the total deaths registered, and the death-rates from these conditions are 101 and 66 per 100,000 population respectively. For the first quarters of the standard period the corresponding rates are 116 and 69 respectively.

Pregnancy and Childbirth.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 121, and are equivalent to a rate of 502 per 100,000 births. This rate is 99 per 100,000 below the corresponding average for the preceding quinquennium.

Violence.—Deaths from violence numbered 659, account for 4·1 per cent. of all deaths, and are equivalent to a rate of 55 per 100,000 persons. These deaths are 28 fewer than in the previous quarter. Of the total deaths assigned to this group, 153 were due to accidents with motor vehicles, which is 38 more than were recorded last quarter. The death-

rate from violence is 4 per 100,000 less than the standard for this period of the year.

For comparative purposes the accompanying table is given showing the death-rates from several important causes in the present quarter and the average rate for the second quarter of the previous five years. Compared with the standard, mortality for this quarter is lower in respect of measles, diphtheria, influenza, tuberculosis (all forms), pneumonia, bronchitis, puerperal conditions and violence, but higher for whooping-cough, cerebro-spinal fever and malignant disease. The general death-rate from all causes is, for this period of the year, comparatively favourable.

CAUSES OF DEATH.	Death-rates per 100,000 population.

REPORT

REPORT OF THE BIRTHS, DEATHS, AND MARRIAGES REGISTERED IN SCOTLAND DURING THE QUARTER ENDING 30TH SEPTEMBER 1931.

THE alterations effected this year in the form and scope of the Quarterly Returns have previously been indicated in the Report for the quarter ending 31st March 1931.

The four main Tables comprised in the Return may be summarised as follows :—

Table I shows for the counties and the large burghs of Scotland the number of births (with distinction as to legitimacy), marriages and deaths (those from the principal epidemic diseases and of infants under one year being shown separately), together with the corresponding rates per 1,000 population. The list of the principal epidemic diseases has been modified.

Table II, as formerly, shows for Scotland the numbers and rates per 1,000 population of births, marriages and deaths for each quarter and for the whole year in each of the last ten years. Illegitimate births and deaths under one year are shown separately.

Table III shows in detail for Scotland the causes of death according to the Detailed International List (adapted) in certain age groups and by sex.

Table IV shows in Short List form the causes of death and, for all causes, the ages at death in the counties and large burghs of Scotland.

Births.—The 22,659 births in the present quarter are 1,463 less than in the preceding quarter, the rate per 1,000 population, 18·6, being 1·4 below that recorded for last quarter. Compared with the standard,* the number of births and the rate per 1,000 population in the present period are 895 and 0·7 respectively below that average.

The birth-rate in the aggregate of large burghs, 19·2, is higher than in the rest of Scotland (17·8), and in individual areas the rates range in burghs from 26·9 in Coatbridge, 22·9 in Port-Glasgow and 22·5 in Hamilton, to 12·4 in Arbroath, 15·7 in Dumfries and 15·8 in Edinburgh, and in counties exclusive of large burghs from 21·8 in Wigtown, 21·6 in Banff and 20·7 in Lanark, to 12·4 in Bute, 12·5 in Selkirk and 12·9 in Peebles.

The proportion of illegitimate births, 7·4 per cent., is 0·1 above the figure for last quarter, but is 0·1 below the standard rate for this period of the year.

Of the 22,659 births registered during the quarter 11,450 were of

* The standard adopted for comparative purposes is the average of the same number and rate for the corresponding quarters of the five preceding years.

males and 11,209 of females. Those registered in July numbered 7,979, in August 7,342 and in September 7,338, the equivalent monthly birth-rates being 19·4, 17·9 and 18·4 per 1,000 population respectively.

Marriages.—The number of marriages registered, 9,351, is 1,193 above that for the previous quarter, the rate per 1,000 population, 7·7, being 0·9 above. The number and rate per 1,000 population for the present period are 157 and 0·2 respectively above the standards for this quarter of the year.

The rate in the aggregate of large burghs is 9·6 per 1,000 as compared with 5·4 for the rest of Scotland, and in individual areas the rates in burghs range from 11·9 in Inverness, 11·0 in Edinburgh and 10·9 in Aberdeen, to 3·7 in Dumbarton, 5·6 in Clydebank and 6·4 in Greenock, and in counties exclusive of large burghs from 7·5 in Roxburgh, 6·8 in Midlothian and 6·5 in Stirling, to 1·7 in Bute, 2·6 in Inverness and 2·8 in Zetland.

Marriages registered in July numbered 3,858, in August 2,474 and in September 3,019, the equivalent monthly marriage-rates being 9·4, 6·0 and 7·6 respectively.

Deaths.*—Deaths registered during the quarter numbered 13,242 and are 2,676 below those recorded in the previous quarter. The corresponding death-rate is 10·8 per 1,000, being 2·4 below that for the previous quarter. The number and rate per 1,000 are 79 and 0·1 below the standard figures for this period of the year.

The death-rate in the aggregate of large burghs is 10·9 compared with 10·8 for the rest of Scotland, and the rates in individual districts range in burghs from 13·1 in Perth, 12·0 in Rutherglen and 11·9 in Arbroath and Inverness, to 8·8 in Hamilton, 9·1 in Port-Glasgow and 9·5 in Clydebank, and in counties exclusive of large burghs from 16·2 in Orkney, 14·8 in Ross and Cromarty and 14·6 in Zetland, to 8·8 in East Lothian, 9·0 in Lanark and 9·2 in Renfrew.

Deaths registered in July numbered 4,512, in August 4,303 and in September 4,427, the equivalent monthly death-rates being 11·0, 10·5 and 11·1 respectively.

Infant Mortality.—Deaths of children under one year numbered 1,353, and are equivalent to a rate of 60 per 1,000 registered live births. These deaths are 514 less than last quarter and the rate is 17 lower. The average infant mortality rate prevailing in the period adopted as standard, however, being only 64 per 1,000 births, the returns of the current quarter show only a slight, although a favourable difference from that level.

The rate of infant mortality, which in the aggregate of large burghs is 65 compared with only 53 in the rest of Scotland, varies in burghal areas from 83 in Perth, 76 in Ayr and Stirling and 73 in Glasgow, to 10 in Dumbarton, 33 in Dumfries and Hamilton and 42 in Kilmarnock, and in counties exclusive of burghs from 100 in Kinross, 98 in Caithness

* *Note.*—Where the place of death differs from the place of usual residence of the deceased, such death, for the purpose of these statistics, is allocated to the place of usual residence if in Scotland.

and 80 in Banff, to 0 in Sutherland, 13 in Zetland, 17 in Bute and 20 in Peebles.

Causes of Death.—*Principal Epidemic Diseases.*—Of the 13,242 deaths registered during the quarter, 476, or 3·6 per cent., were attributed to the principal epidemic diseases. These deaths include 97 from measles, 19 from scarlet fever, 121 from whooping-cough, 69 from diphtheria, 56 from influenza and 54 from cerebro-spinal fever. Compared with the previous quarter, the main features in this group of diseases are a diminution in the deaths attributed to each of those specified above with the exception of measles, from which 13 more deaths are recorded. The death-rate from the entire group of epidemic diseases is 39 per 100,000 population, the highest rates being found in the burghs of Kilmarnock and Glasgow with rates respectively of 0·6 and 0·7 per 1,000 and in the counties exclusive of large burghs of Kincardine and Zetland, each with a rate of 0·6 per 1,000 population.

Tuberculosis.—Deaths from all forms of tuberculosis, 928, account for 7·0 per cent. of the total deaths. Of these, 661 are ascribed to tuberculosis of the respiratory system, a decrease compared with last quarter of 146, 116 to tuberculosis of the central nervous system, a decrease of 48, 45 to abdominal tuberculosis, a decrease of 38, and 106, or 15 less to other forms of the disease. The quarterly death-rate from all forms of tuberculosis is 76 per 100,000 compared with 83 for the same quarter of the preceding quinquennium, and from respiratory tuberculosis 54 compared with 58.

Malignant Disease.—Deaths from this cause, which numbered 1,757, account for 13·3 per cent. of deaths from all causes, and are equivalent to a rate of 144 per 100,000 population. These deaths are 42 more than in the previous quarter, but the rate is exactly equal to the standard value.

Respiratory Diseases.—Deaths from the principal diseases of the respiratory system, pneumonia and bronchitis, show a decrease in numbers compared with the previous quarter, in the case of pneumonia from 1,223 to 622 and of bronchitis from 795 to 433. Pneumonia was responsible for 4·7 and bronchitis for 3·3 per cent. of the total registered deaths, and the death-rates from these conditions are 51 and 35 per 100,000 population respectively. For the third quarters of the standard period the corresponding rates are 63 and 36 respectively.

Pregnancy and Childbirth.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 115, and are equivalent to a rate of 508 per 100,000 births. This rate is 129 per 100,000 below the corresponding average for the preceding quinquennium.

Violence.—Deaths from violence numbered 704, account for 5·3 per cent. of all deaths, and are equivalent to a rate of 58 per 100,000 persons. These deaths are 45 more than in the previous quarter. Of the total deaths assigned to this group, 201 were due to accidents with motor vehicles, which is 48 more than were recorded last quarter. The death-rate from violence is 3 per 100,000 less than the standard for this period of the year.

For comparative purposes the accompanying table is given showing the death-rates from several important causes in the present quarter and the average rate for the third quarter of the previous five years. Compared with this standard, mortality for the period under review is lower in respect of scarlet fever, whooping-cough, influenza, tuberculosis (all forms), pneumonia and puerperal conditions, but slightly higher for measles, cerebro-spinal fever and accidents with motor vehicles. The general death-rate from all causes is substantially equal to the average rate prevailing in this quarter of the last quinquennium. In the previous two quarters of the present year general mortality was, if anything, a little more favourable than in corresponding periods of the last five years.

REPORT

THIS Report deals more especially with the statistics of the fourth quarter of the year 1931, but as figures relative to the entire year are now available, a short preliminary statement of them is included. A full report of the vital statistics of the year will in due course be published in the Seventy-seventh Annual Report. The annual figures here given may be accepted as substantially correct, but they are provisional, and will be superseded by those appearing in the Annual Report referred to above.

The chief features of the vital statistics of the year under review are a birth-rate which is the lowest on record, a marriage-rate lower than in the previous year but equal to the average rate prevailing in the preceding quinquennium, a general death-rate from all causes equal to that recorded in 1930 but showing a slight improvement on the previous quinquennial average, and an infant death-rate which on only one previous occasion (1923) has been lower.

Births registered during the year numbered 92,209, the rate per 1,000 population being 19·0. These are 2,340 fewer than were registered in the previous year and 4,465 fewer than the mean annual number registered during the preceding five years. The rate per 1,000 population is respectively 0·5 and 0·9 below the figure for the previous year and the average for the previous five years. Of the total births registered, 6,655 or 7·2 per cent. were illegitimate, a proportion which differs little from the figures recorded in recent years.

Marriages registered during the year, 32,667 in number, are equivalent to a rate of 6·7 per 1,000 total population. These are 676 and 0·2 respectively below the number and rate for 1930, but show no great difference from the previous quinquennial average. The slight upward trend of the marriage-rate which has been manifest in recent years has thus been interrupted.

Deaths from all causes numbered 64,230, which is 55 and 1,787 less than were registered in the previous year and the average annual number registered in the period 1926-30. The death-rate for the year, 13·3 per 1,000 population, is the same as the corresponding figure for 1930, but is slightly below the average rate prevailing in the previous quinquennium.

Of the total 64,230 deaths, 7,545 were of infants under one year. The infantile mortality rate, 82 per 1,000 births, is 1 less than that of the previous year and 3 less than the preceding quinquennial average. With the exception of a rate of 79 in 1923, this is the lowest Scottish infantile mortality rate on record.

Mortality from the group of epidemic diseases as a whole shows an improvement compared with the corresponding average for the standard

period 1926-30. For individual diseases, the death-rates from measles, scarlet fever, diphtheria and influenza are lower, but those from whooping-cough and cerebro-spinal fever higher than average. The comparatively favourable death-rate from measles is due to the low rates prevailing in the first half of the year. In the third and more particularly in the fourth quarters of 1931 the death-rate from this cause was over average. The heavier mortality attributed to whooping-cough, on the other hand, was confined to the first six months of the year, the experience of the latter half of the year under review being, if anything, more favourable than that of the standard period. The higher cerebro-spinal fever death-rate and the lower influenza mortality have been evidenced in each quarter of the year.

The death-rate from all forms of tuberculosis, 87 per 100,000 population, differs little from the figure for the previous year, but is lower than the previous quinquennial average. The improvement holds good when each individual quarter of the year is separately considered and also in the various forms of the disease, with the exception of that of the central nervous system, in which no appreciable change is manifest.

Deaths from malignant disease totalled 7,159 and have again increased in number, the equivalent annual death-rate being 148 per 100,000. These are the highest figures from this cause so far recorded. The deterioration, though small in magnitude when annual differences are considered, has been steadily progressive for many years, and numerically the disease in the year 1931 is second only to heart disease in order of frequency as a cause of death.

The deaths attributed to the chief respiratory conditions, bronchitis and pneumonia, numbered 3,673 and 4,955, the corresponding rates per 100,000 population being 76 and 102. These are less than the number and rates found in the previous year and are lower than the averages of the previous five year period. In the case of pneumonia lower rates compared with the standard were found for each quarter of the year, but in bronchitis the improvement for the year as a whole is almost entirely due to the low rate prevailing in the fourth quarter of the year.

Deaths of mothers from diseases and accidents of pregnancy and parturition numbered 544, and correspond to a mortality of 5.9 per 1,000 births. This rate is lower than the published rates both for 1930 and for the preceding five years, but the decline is at least partly due to a modification of the classification of puerperal deaths when some other cause has also been specified.

Deaths attributed to violent causes during the year numbered 2,727, which are 333 fewer than in 1930 and correspond to an annual mortality rate of 56 per 100,000 population. Compared with the average rate prevailing in the previous quinquennium, the rate for the year 1931 is slightly lower, improvement being noticeable in each of the four quarters of the year. Deaths from accidents with motor vehicles numbered 621 and show a small increase compared with the standard rate.

A general summary of the causes of, and ages at, death during the year 1931 is given in Table IIA. Compared with the returns of the previous year increases are observed in the numbers assigned to apoplexy,

* Including typhus fever, smallpox, dysentery, erysipelas, acute poliomyelitis, and lethargic encephalitis.

heart disease and appendicitis, and decreases in respect of disease of the liver, nephritis, suicide and other violent deaths.

The deaths recorded in the several age periods are fewer than the corresponding figures for 1930 with the exception of those in the age period 15-25 years and at ages over 55 years, in which increases are observed.

REPORT OF THE BIRTHS, DEATHS, AND MARRIAGES REGISTERED IN SCOTLAND DURING THE QUARTER ENDING 31ST DECEMBER 1931.

THE alterations effected this year in the form and scope of the Quarterly Returns have previously been indicated in the Report for the quarter ending 31st March 1931.

The four main Tables comprised in the Return may be summarised as follows :—

Table I shows for the counties and the large burghs of Scotland the number of births (with distinction as to legitimacy), marriages and deaths (those from the principal epidemic diseases and of infants under one year being shown separately), together with the corresponding rates per 1,000 population. The list of the principal epidemic diseases has been modified.

Table II, as formerly, shows for Scotland the number and rates per 1,000 population of births, marriages and deaths for each quarter and for the whole year in each of the last ten years. Illegitimate births and deaths under one year are shown separately.

Table III shows in detail for Scotland the cause of death according to the Detailed International List (adapted) in certain age groups and by sex.

Table IV shows in Short List form the causes of death and, for all causes, the ages at death in the counties and large burghs of Scotland.

Births.—The 21,870 births in the present quarter are 789 less than in the preceding quarter, the rate per 1,000 population, 17·9, being 0·7 below that recorded for the previous quarter. Compared with the standard* the number of births and the rate per 1,000 population in the present period are 1,377 and 1·1 respectively below that average.

The birth-rate in the aggregate of large burghs, 18·8, is higher than in the rest of Scotland (16·8), and in individual areas the rates ranged in burghs from 26·1 in Hamilton, 21·9 in Coatbridge, and 21·5 in Port Glasgow, to 14·8 in Dumfries, 15·3 in Rutherglen, and 15·5 in Edinburgh, while in counties, exclusive of large burghs, it ranged from 20·6 in West Lothian, 20·4 in Wigtown, and 20·3 in Kirkcudbright, to 10·2 in Zetland, 10·5 in Peebles, and 10·8 in Bute.

The proportion of illegitimate births, 6·7 per cent., is 0·7 less than the rate for last quarter, and is 0·4 less than the standard rate for this period of the year.

* The standard adopted for comparative purposes is the average of the same number and rate for the corresponding quarters of the five preceding years.

Of the 21,870 births registered during the quarter 11,040 were of males and 10,830 were of females. Those registered in October numbered 7,747, in November 6,893, and in December 7,230, the equivalent monthly birth-rates being 18·8, 17·3, and 17·6 per 1,000 population respectively.

Marriages.—The number of marriages registered, 8,090, is 1,261 below that of the previous quarter, the rate per 1,000 population, 6·6, being 1·1 below. The number per 1,000 population for the present period is 30 less than the standard, but the rate is the same as the average.

The rate in the aggregate of large burghs is 7·6 per 1,000 compared with 5·5 for the rest of Scotland, and in individual areas the rate in burghs ranged from 12·5 in Inverness, 9·9 in Ayr, and 9·6 in Aberdeen, to 3·3 in Dumbarton, 5·3 in Clydebank, and 5·3 in Coatbridge. In counties exclusive of large burghs this rate ranged from 8·1 in Orkney, 7·8 in Kincardine, 7·6 in Kirkcudbright, and 7·6 in Wigtown, to 2·7 in Inverness, 3·6 in Renfrew, and 3·6 in Ross and Cromarty.

Marriages registered in October numbered 2,342, in November 2,437, and in December 3,311, the equivalent monthly marriage-rates being 5·7, 6·1, and 8·1 respectively.

Deaths.*—Deaths registered during the quarter numbered 14,880 and are 1,638 more than those recorded in the previous quarter. The corresponding death-rate is 12·2 per 1,000, being 1·4 above that for the previous quarter. The number and rate per thousand are 1,143 and 0·9 respectively below the standard figure for the fourth quarter.

The death-rate in the aggregate of large burghs is 12·9 compared with 11·4 for the rest of Scotland. The rates in individual large burghs ranged from 14·9 in Dumbarton, 13·9 in Glasgow, and 13·3 in Perth, to 9·6 in Rutherglen, 10·3 in Dunfermline, 11·1 in Hamilton, and 11·1 in Port Glasgow. In counties exclusive of large burghs it varied from 16·4 in Bute, 15·5 in Sutherland, and 14·6 in Zetland, to 9·0 in East Lothian, 9·7 in Orkney, 10·2 in Roxburgh, and 10·2 in Stirling.

Deaths registered in October numbered 4,511, in November 5,019, and in December 5,350, the equivalent monthly death-rates being 11·0, 12·6, and 13·0 respectively.

Infant Mortality.—Deaths of children under one year numbered 1,672 and are equivalent to a rate of 76 per 1,000 registered live births. These deaths are 319 more than in the previous quarter and the rate is 16 more. Compared with the standard for the fourth quarter the infantile mortality rate is 14 less.

This rate for the large burghs was 90, while for the rest of Scotland it was 58. In the large burghs individually it varied from 141 in Dumfries, 111 in Glasgow, and 109 in Coatbridge, to 37 in Kirkcaldy, 42 in Dunfermline, and 57 in Port Glasgow. In counties exclusive of large burghs it varied from 154 in Nairn, 89 in Dumbarton, and 87

* *Note.*—Where the place of death differs from the place of usual residence of the deceased, such death, for the purpose of these statistics, is allocated to the place of usual residence if in Scotland.

in Kinross, to 0 in Sutherland, 15 in Selkirk, and 33 in Berwick, in Ross and Cromarty, and in Roxburgh.

Causes of Death.—*Principal Epidemic Diseases.*—Of the 14,880 deaths registered during the quarter 927 or 6·2 per cent. were attributed to the principal epidemic diseases. These deaths include 404 from measles, 58 from scarlet fever, 90 from whooping-cough, 87 from diphtheria, 140 from influenza, 61 from cerebro-spinal fever, and 87 others. Compared with the previous quarter the main feature in this group of diseases is an increase in deaths attributed to each of those specified, with the exception of whooping-cough, from which 31 fewer deaths were recorded. The death-rate from the entire group of epidemic diseases is 76 per 100,000 population, the highest rates being found in the burghs of Dumbarton, 3·1 per 1,000, in Coatbridge 1·7, and in Glasgow 1·7, and in counties exclusive of large burghs, in Lanark 1·0, in Sutherland 1·0, and in East Lothian 0·8.

Tuberculosis.—Deaths from all forms of tuberculosis, 898, account for 6·0 per cent. of the total deaths and are 30 fewer than in the previous quarter. Of them 654 were ascribed to tuberculosis of the respiratory system, a decrease of 7 compared with the previous quarter, 98 to tuberculosis of the central nervous system, a decrease of 18, 53 to abdominal tuberculosis, an increase of 8, and 93 to other forms of tuberculosis, a decrease of 13. The quarterly death-rate from all forms of tuberculosis is 74 per 100,000 compared with 84 for the same quarter in the preceding five years, and from respiratory tuberculosis 54 compared with 62.

Malignant Disease.—Deaths from this cause numbered 1,847 and account for 12·4 per cent. of deaths from all causes and equal a rate of 151 per 100,000. These deaths are 90 more than in the previous quarter, while the rate is 6 above the standard.

Respiratory Diseases.—Deaths from the principal diseases of the respiratory system, pneumonia and bronchitis, show an increase in numbers compared with the previous quarter, from pneumonia an increase of 345, and from bronchitis of 255. Pneumonia was responsible for 6·5 per cent. of the total deaths and bronchitis for 4·6 per cent., the death-rates from these conditions being 79 and 56 per 100,000 population respectively. The standard death-rate from pneumonia for the fourth quarter is 119 and from bronchitis 76 per 100,000.

Pregnancy and Childbirth.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 152 and are equal to a rate of 695 per 100,000 births. This rate is 9 per 100,000 below the corresponding average for the preceding five years.

Violence.—Deaths from violence numbered 672, account for 4·5 per cent. of all deaths, and are equivalent to a rate of 55 per 100,000. These deaths are 32 fewer than in the previous quarter. Of the total deaths assigned to this group 152 were due to accidents with motor vehicles, which is 49 fewer than were recorded last quarter. The death-rate from violence is 4 per 100,000 less than the standard for this period.

For comparative purposes the accompanying table is given showing the death-rates from several important causes in the present quarter, and the average rate for the fourth quarter of the previous five years. Compared with the standard, mortality for the period under review is lower in respect of whooping-cough, diphtheria, influenza, tuberculosis (all forms), pneumonia, bronchitis, puerperal conditions and violence, but higher chiefly in respect of measles and to a much less extent of scarlet fever and malignant disease. The general death-rate from all causes is somewhat less than the average rate prevailing in this quarter during the last quinquennium, the comparatively favourable mortality being almost entirely attributable to the lower frequency of bronchitis and pneumonia.
